

Interoperability Seminar

Free Assistance

Thursday, October 15th 2009

Description

During the seminar, advantages of developing interoperable solutions at all levels and productive areas will be shown. Mainly highlighting aspects such as cooperation, coordination, flexibility, and time reductions.

As part of that, these aspects will be focused on:

- The great efforts in research, development, and innovation that are being performed today in regards to interoperability; in regards to current challenges and remaining obstacles.
- The importance Public Administration is giving to interoperability: *eGovernment*, *eProcurement*.
- How large companies are promoting and providing interoperability solutions.
- How some small businesses are also participating in the development of interoperable solutions.

Objectives

To introduce to companies within the ICT sector in the Valencian community a higher knowledge about interoperability at two levels: possibilities that it can offer and the importance it has acquired as of today.

Speakers

Representatives of these major entities involved in promoting interoperability:

- Research Centers, Transferences, and Universities
- Public Administration
- Large Enterprises
- Small Businesses
